

Moe Htet Ar Kar (Phoe Cho)

Cybersecurity Engineer | AI Red Teamer | Penetration Tester

AI Red Teaming | AI Penetration Testing | LLM Security

Email: moehtetarkar259@gmail.com GitHub: github.com/moe1112025

PROFILE

Security-focused engineer building hands-on assessments around AI/LLM applications, agents, APIs, web applications, and security tooling, with an emphasis on structured methodology, evidence, and professional reporting.

CORE DOMAINS

Offensive Security	Nmap, Burp Suite, Wireshark, Metasploit, Kali Linux
AI / LLM Security	Prompt injection, RAG security, AI agents, output handling, attack-surface mapping
Engineering	Python, FastAPI, Linux, Git, Docker
AI / ML	Machine Learning, OpenCV, TensorFlow, robotics programming

SELECTED PROJECTS

- SHADOW-AI** - Standalone AI/LLM security assessment platform covering reconnaissance, attack-surface mapping, modular testing, evidence, findings, attack-chain data, and reporting. Python, FastAPI, HTTPX, SQLite, Docker, Pytest.
- PRO Password Security Analyzer** - Standalone Python utility for password characteristics, policy analysis, theoretical and observed entropy models, local corpus checks, and scenario-based timeline estimation without password storage.
- GHOST-LOG** - Standalone endpoint-security laboratory for read-only process reconnaissance, policy triage, deterministic analysis, optional bounded LLM assistance, and structured local reporting.

SECURITY ASSESSMENT PORTFOLIO

- OWASP Juice Shop web security assessment
- Indirect prompt injection assessment
- LLM APIs with excessive agency
- AI agents and secondary vulnerability chaining
- Insecure output handling in LLM applications
- API endpoint exposure via documentation / legacy routes

CREDENTIALS & TECHNICAL LEARNING

- Google Cybersecurity Professional Certificate / credential
- Kali Linux Ethical Hacking specialization
- Practical Pentesting course / certificate record
- LLM Security course / certificate record
- Generative AI course / certificate record
- Machine Learning, OpenCV, Robotic Programming, PowerShell specialization records

NOTE

Credential titles are presented conservatively where the supplied verification URL does not by itself establish an industry certification title. Project claims are limited to documented repository scope.
